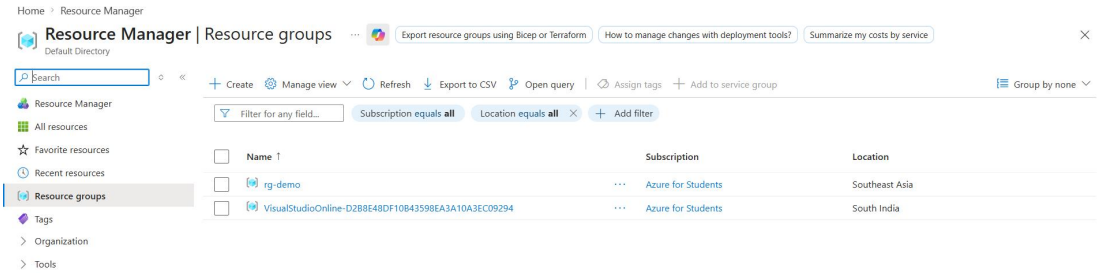
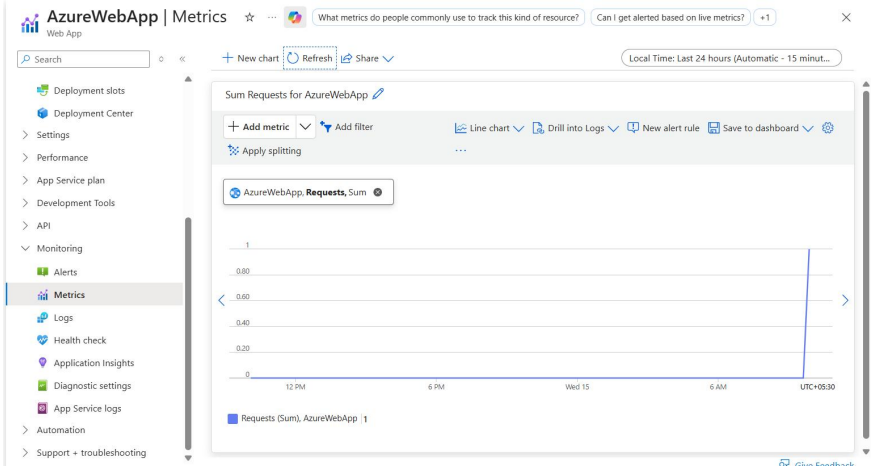
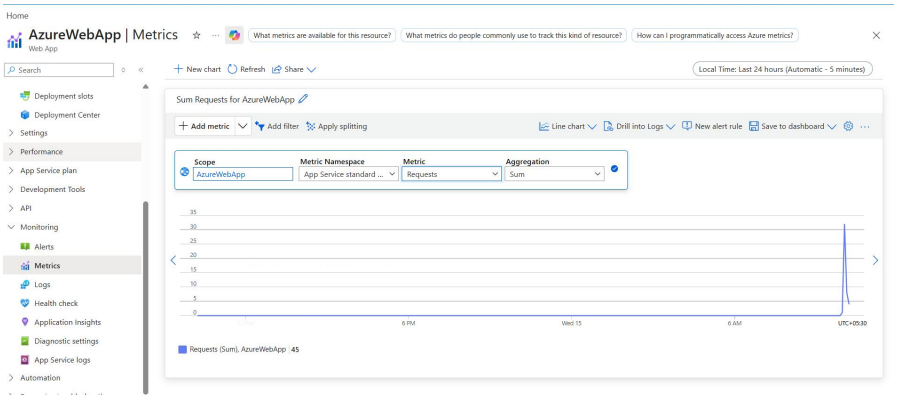
Day 82

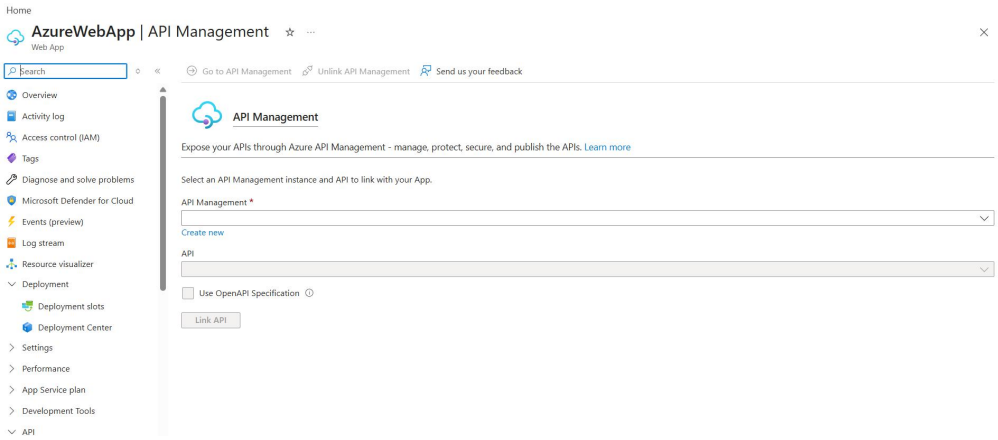


Metric





Creating API Management



Home › AzureWebApp | API Management

Create API Management service

API Management service

Basics | Monitor + secure | Networking | Managed identity | Tags | Review + install

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * : Azure for Students

Resource group * : rg-demo

Create new

Instance details

Region * : (Asia Pacific) Southeast Asia

Resource name * : AzureWebApp-apim

Organization name * : anjalisikarwar1905

Administrator email * : anjalisikarwar1905@gmail.com

Pricing tier

API Management pricing tiers vary in computing capacity per unit and the offered feature set - for example, support for virtual networks, multi-regional deployments, or self-hosted gateways. To accommodate more API requests, consider adding API Management service units instead. Learn more

API Management

Expose your APIs through Azure API Management - manage, protect, secure, and publish the APIs. Learn more

The linked API Management instance 'AzureWebApp-apim' is in the transitioning state.

If you just created a new instance, keep in mind that provisioning takes a few minutes for the consumption tier and around half an hour for the other tiers.
You can return to this process once your instance is ready.

Add inbound policy
Filter IP addresses
ip-filter
Set filtering of incoming requests based on allowed or blocked IP addresses.
Learn more
Limit call rate
rate-limit-by-key
Set rate limit policy to control the number of requests reaching the backend service.
Learn more
Mock responses
mock-response
Set mocking policy to return a response based on the defined samples, rather than by calling the backend service.
Set query parameters
set-query-parameter
Add, remove or change the query parameters that are passed to the backend service.
