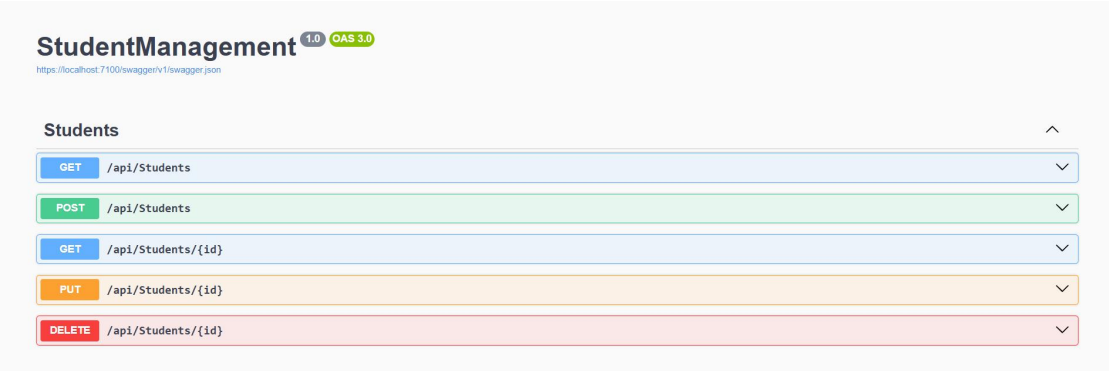
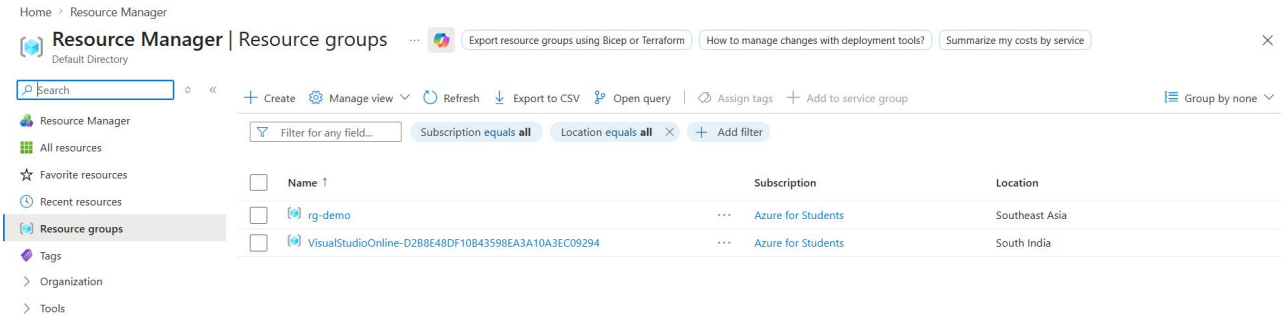
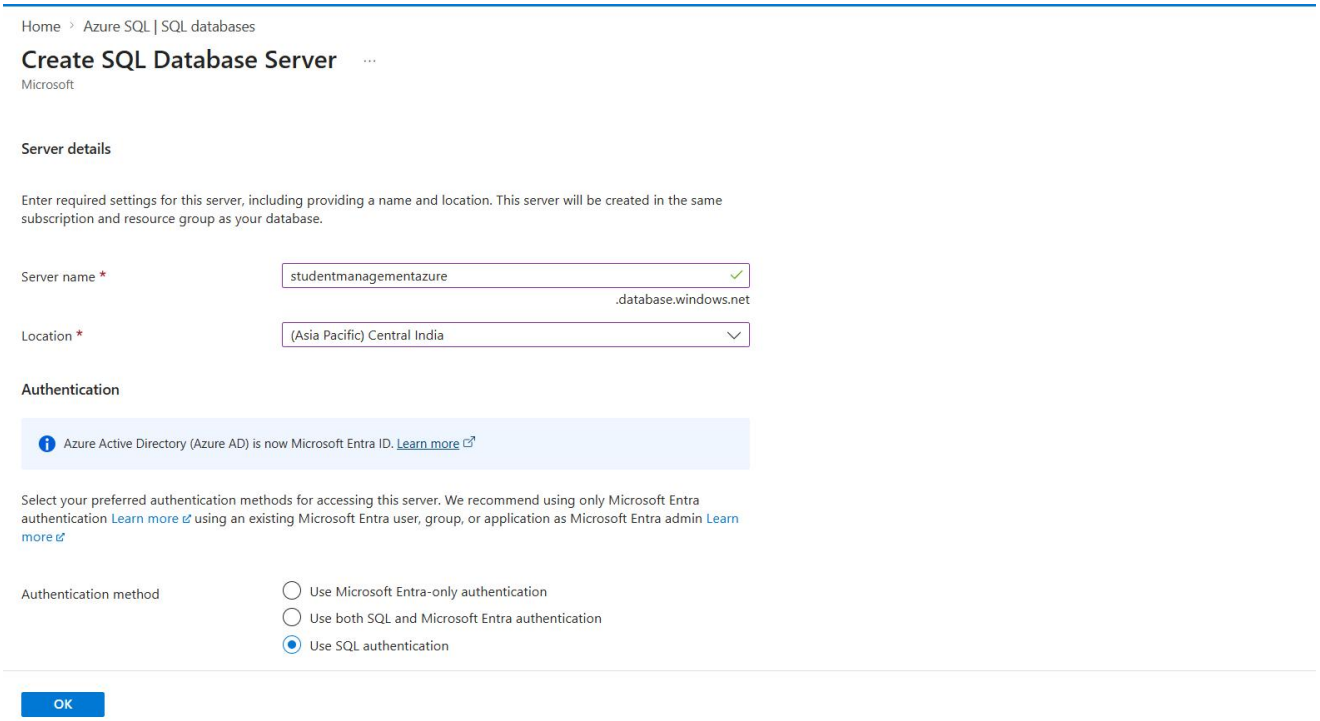
Part 1: Create Web API with EF Core



Part 2: Create Azure SQL Database





Home › Azure SQL | SQL databases

Create SQL Database

Microsoft

Basics | Networking | Security | Additional settings | Tags | Review + create

Create a SQL database with your preferred configurations. Complete the Basics tab then go to Review + Create to provision with smart defaults, or visit each tab to customize. Learn more

Free offer applied! You get 100,000 vCore seconds, 32GB of data, and 32GB of backup storage free per month for the lifetime of your subscription. Learn more

Remove offer

SQL Database Hyperscale: Low price, high scalability, and best feature set. Learn more

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * Azure for Students

Resource group * (New) rg-demo

Create new

Review + create | Next : Networking >

Firewall rules

Allow certain public internet IP addresses to access your resource. Learn more

Add your client IPv4 address (47.15.222.116) | Add a firewall rule

Rule name	Start IPv4 address	End IPv4 address
ClientIPAddress_2026-4-13_12-8-25	152.59.82.142	152.59.82.142

Exceptions

Allow Azure services and resources to access this server

Part 3: Secure Connection String

StudentManagement (studentmanagementazure/StudentManagement) | Connection strings

ADO.NET (Microsoft Entra passwordless authentication)

Microsoft.Data.SqlClient Quickstart

Entity Framework Core Quickstart

```
Server=tcp:studentmanagementazure.database.windows.net,1433;Initial Catalog=StudentManagement;Encrypt=True;TrustServerCertificate=False;Connection Timeout=30;Authentication="Active Directory Default";
```

ADO.NET (SQL authentication)

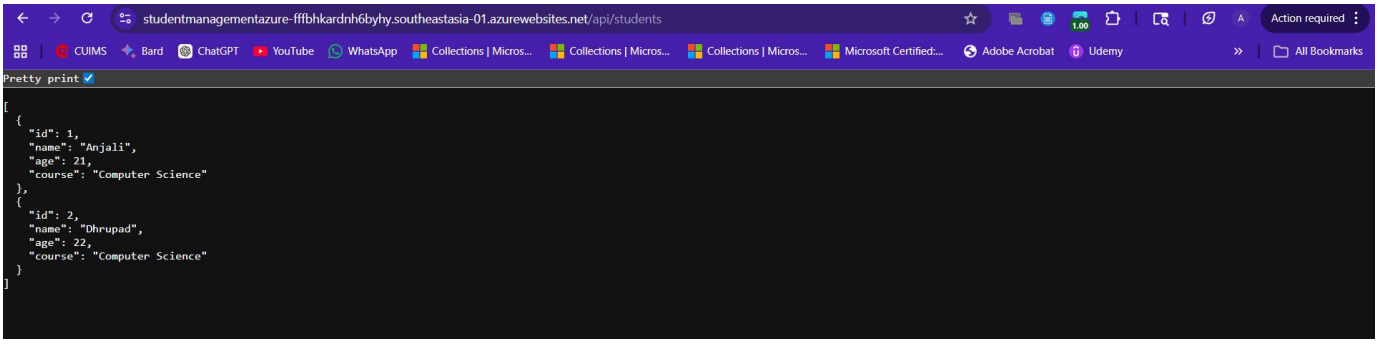
```
Server=tcp:studentmanagementazure.database.windows.net,1433;Initial Catalog=StudentManagement;Persist Security Info=False;User ID=Student;Password={your_password};MultipleActiveResultSets=False;Encrypt=True;TrustServerCertificate=False;Connection Timeout=30;
```

Copy Copied

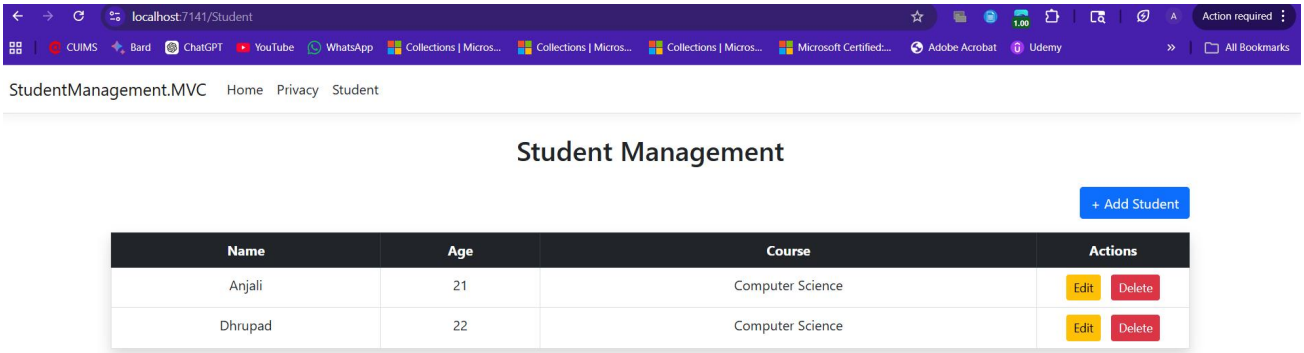
Download ADO.NET driver for SQL server

```
{
  "Logging": {
    "LogLevel": {
      "Default": "Information",
      "Microsoft.AspNetCore": "Warning"
    }
  },
  "AllowedHosts": "*",
  //"ConnectionStrings": {
  //  "AppDbContext": "Server=.\\sqlexpress;Database=StudentManagementDB;Trusted_Connection=True;Mu
  //}
  "ConnectionStrings": {
    "AppDbContext": "Server=tcp:studentmanagementazure.database.windows.net,1433;Initial Catalog=St
  }
}
```

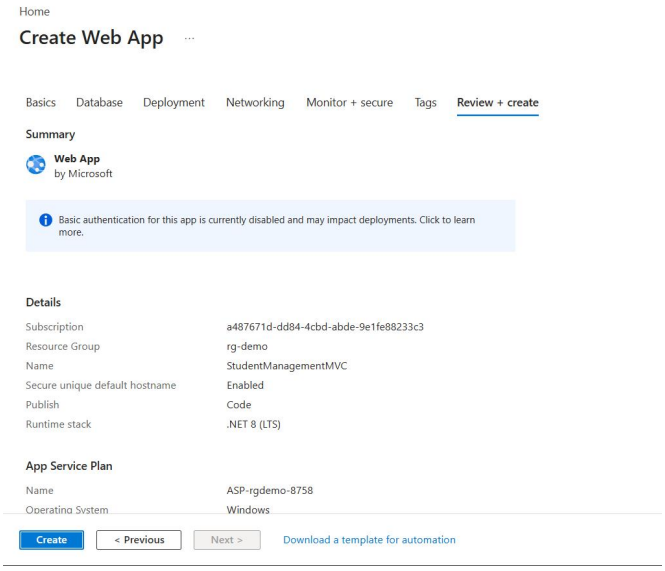
Part 4: Deploy Web API to Azure

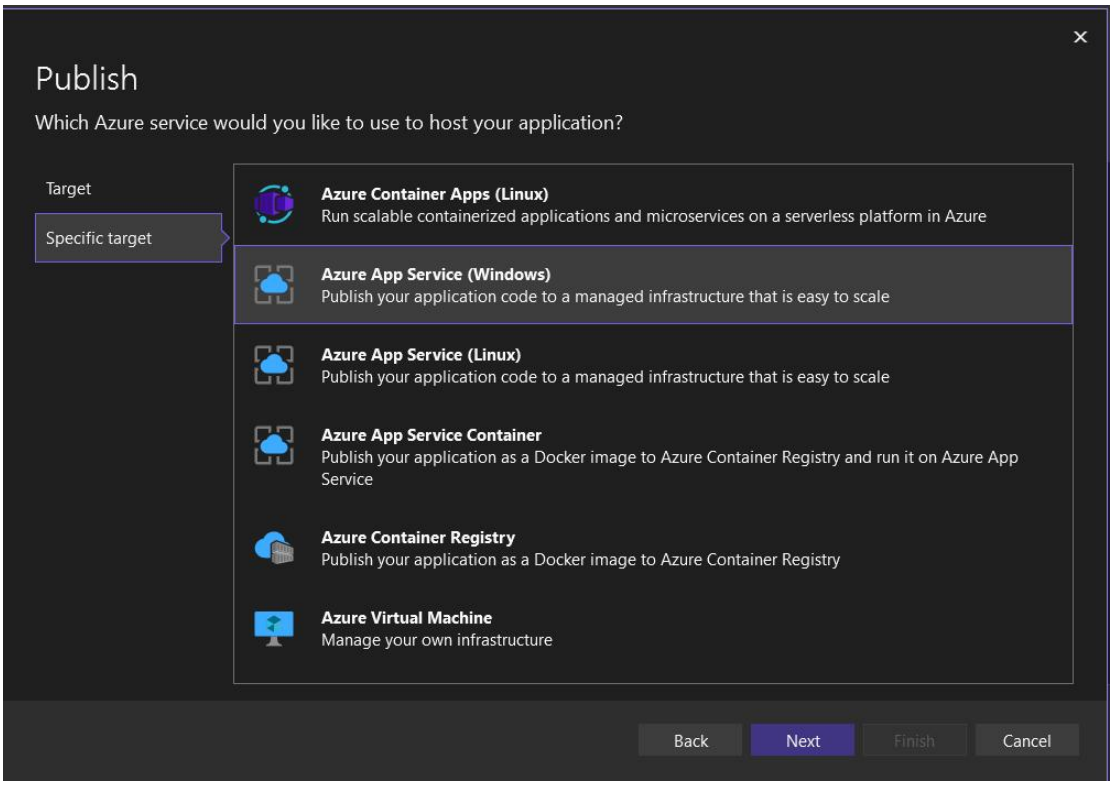


Part 5: Create MVC Application



Part 6: Deploy MVC App





Publish
Which Azure service would you like to use to host your application?
Target
Specific target
Azure Container Apps (Linux)
Run scalable containerized applications and microservices on a serverless platform in Azure
Azure App Service (Windows)
Publish your application code to a managed infrastructure that is easy to scale
Azure App Service (Linux)
Publish your application code to a managed infrastructure that is easy to scale
Azure App Service Container
Publish your application as a Docker image to Azure Container Registry and run it on Azure App Service
Azure Container Registry
Publish your application as a Docker image to Azure Container Registry
Azure Virtual Machine
Manage your own infrastructure
