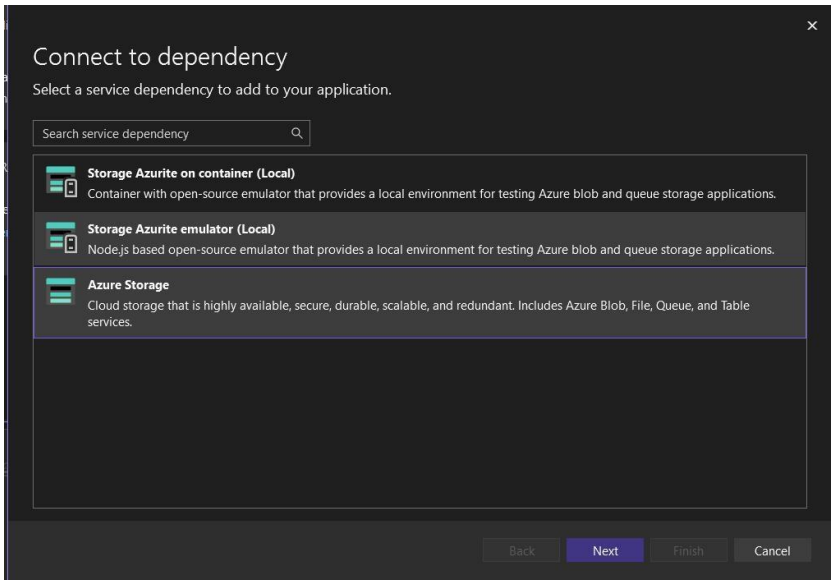
Event Grid trigger
Use Azurite for runtime storage account (AzureWebJobsStorage)
Enable container support



Connect to dependency
Select a service dependency to add to your application.
Search service dependency
Storage Azurite on container (Local)
Container with open-source emulator that provides a local environment for testing Azure blob and queue storage applications.
Storage Azurite emulator (Local)
Node.js based open-source emulator that provides a local environment for testing Azure blob and queue storage applications.
Azure Storage
Cloud storage that is highly available, secure, durable, scalable, and redundant. Includes Azure Blob, File, Queue, and Table services.

Publish
Which Azure service would you like to use to host your application?
Target
Specific target
Azure Function App
Publish your application code to a serverless compute that scales dynamically and runs code on-demand
Azure Function App Container
Publish your application as a Docker image to Azure Container Registry and run it on Azure Function App
Azure Container Apps (Linux)
Run scalable containerized applications and microservices on a serverless platform in Azure
Azure Container Registry
Publish your application as a Docker image to Azure Container Registry

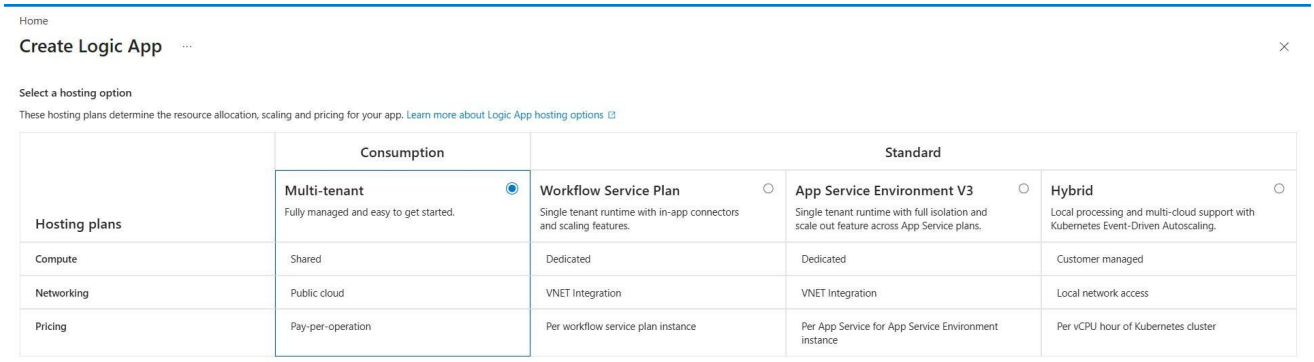
PART 3 : Creating Logic App



Create Logic App (Multi-tenant)

Basics | Tags | Review + create

Create a logic app, which lets you group workflows as a logical unit for easier management, deployment and sharing of resources. Workflows let you connect your business-critical apps and services with Azure Logic Apps, automating your workflows without writing a single line of code.

Project Details

Select a subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * : Azure for Students

Resource Group * : rg1

Create new

Instance Details

Logic App name * : MyLogicApp

Region * : Southeast Asia

Enable log analytics * : Yes / No

Workflow Type *

- **Stateful**
- **Conversational Agents (Preview):** Stateful workflows that use AI agents to complete tasks through chat interactions or other agents.
- **Autonomous Agents (Preview):** Stateful workflows that use AI agents to complete tasks and can start from any trigger, such as an event, schedule, or API call.
